**Subject:** Don't Lock Georgia into 50 Years of Dirty Air

Dear Dr. Couch

Georgia does not need polluting, outdated coal technology when there are cost effective energy alternatives available right now. Solar energy is being installed across the state, including on farms in south Georgia. But Longleaf is still relying on outdated technology, technology that becomes more outdated each and every day.

In reviewing the Longleaf permit, EPD sees Longleaf as its client, but it isn't. I am your client, and so is every citizen of Georgia who drinks the water and breathes the air. Please protect our families' health and clean up the water we drink, the swamps, creeks, and rivers we fish, and the air we breathe.

Dear Dr. Couch

you have a difficult job, and I hope you will find a compromise between our need for electricity and the environmental needs of the region.

Every developer wants to invest as little as possible to achieve their maximum revenue, that is capitalism, but finding ways to better protect the environment and our air quality is the job of a regulator.

I hope you can work with the capitalists to install state-of- the art smoke stack cleaners and scrubbers.

Dear Dr. Couch

When will we ever learn? The pollutants from coal fired power plants are killing our rivers. They are damaging our children through the fish that we consume. We, here in SE GA., are in an economically depressed area so that our population relies on fish from our rivers to supplement our diets. Please don't allow ANY more coal fired plants in Ga. There are cost effective energy alternatives available right now. Solar energy is being installed across the state, including on farms in south Georgia. Not only is Longleaf a coal plant but it is still relying on outdated technology.

Your position in EPD is to protect the people of Georgia. I am your client, not Longleaf. Every citizen of Georgia who drinks the water and breathes the air, is your client. Please protect our families' health and clean up the water we drink, the swamps, creeks, and rivers we fish, and the air we breathe.

Solar energy is being installed across the state, including on farms in south Georgia. But Longleaf is still relying on outdated technology, technology that becomes more outdated each and every day.

In reviewing the Longleaf permit, EPD sees Longleaf as its client, but it isn't. I am your client, and so is every citizen of Georgia who drinks the water and breathes the air. Please protect our families' health and clean up the water we drink, the swamps, creeks, and rivers we fish, and the air we breathe.

Dear Dr. Couch

Georgia does not need polluting, outdated coal technology when there are cost effective energy alternatives available right now.

Georgia has about five times the sunlight as Germany which produces 13% of its power by solar energy. There is no reason for Georgia solar manufacturers to ship overseas - they should be shipping in state to Georgia!

Solar energy is being installed across the state, including on farms in south Georgia. But Longleaf is still relying on outdated technology, technology that becomes more outdated each and every day. Energy conservation strategies, such as those that have been tried and work in California, are ignored.

In reviewing the Longleaf permit, EPD sees Longleaf as its client, but it isn't. I am your client, and so is every citizen of Georgia who drinks the water and breathes the air. Dear Dr. Couch

Hello Dr.Couch

Below is a generic posting that I agree with.

I have to say that it is only obvious that the coal process should utilize the highest level of clean burn process possible. Submission of permit within the manipulated legislation to allow this process doesnot make it a correct choice for the next 50 plus years to envelop georgia citizens in toxins that are known of at this time. The EPD needs to be the last line on choicea that are best for the people not the corporations and their attorneys. It is your choice that saves our kids, our environment, our future.

Make the choice that does this

Thank you Tomas Aloisio

Georgia does not need polluting, outdated coal technology when there are cost effective energy alternatives available right now.
