Atlanta, GA 30334

Dear Dr. Couch:

The majority of the Johnson County Chamber Board of Directors would like to express their support for the Plant Washington project. We feel this facility would provide new jobs for our area and a significant boost to the economy throughout adjoining counties.

We feel the advanced technology planned for this facility will serve the need for electricity as well as offering the best protection for individuals and our environment.

Hopefully this project will become a reality for Washington County in the near future.

Sincerely,

Deidre Ledford  
Chamber President

Dear Dr. Couch,

I have lived in Washington County all of my life and work at the local power company. Looking to the future, I can see the need for power increasing as the needs of Washington County residents and businesses grow. We need Plant Washington to make sure that these needs can be met.

I wanted to write to you to let you know that I am in support of Plant Washington. I believe that with your department's oversight, it will be clean and safe for those of us who live here.

Sincerely,

Dear Dr. Couch,

I have lived in Washington County most of my life and am saddened by the job cuts and business closings that I am now seeing. In this current time of economic crisis, I see the need for more jobs in Washington County. I believe that Plant Washington is the answer.

I wanted to write to you to let you know that I am in support of Plant Washington. I have read the articles written about Plant Washington in our local paper and have talked to other Washington County citizens. I have also read letters written to the newspaper by those who oppose Plant Washington.

In my opinion, we need Plant Washington, and I believe that it will be clean and safe for those of us who live here.

Sincerely,

Dear Dr. Couch:

The purpose of this letter is to show my support for Plant Washington. I was born in Sandersville, grew up here, and have lived and worked in this place most of my life. I care deeply about Washington County and the surrounding area and would certainly be against anything that I felt would do harm to my home.

I am convinced that a well thought out plan has been developed for Plant Washington that will assure safety for the environment and does not degrade water availability for the future.

The use of a domestic source of energy such as coal to generate power is a smart thing to do. We are indeed fortunate that Washington County has been chosen as the site. I urge that your Department approve the necessary permits so that this facility can be built to the benefit of Washington County Citizens and all Georgians.

Sincerely,

Charles Jordan

Dear Dr.Couch,

I have come to learn that we are heading toward a critical period in Georgia's history as it relates to electrical services.

It is my understanding that we are on a course that will result in an inadequate power supply to address even our basic needs by the end of the next decade. I am in emergency services and know that public services will suffer, therefore, people of my county will suffer in ways unimaginable to them.

This is one reason I support the efforts of Power4Georgians to build and operate Plant Washington. When it is placed in operation every megawatt of electricity it produces and places on Georgia's power grid will be needed. We need to move forward in assuring this proposition becomes reality sooner, not later.

My profession makes me very aware of human health. In my maturity, I have become aware of the environment and the challenges we face in the future. I have no doubt with oversight of your agency and the environmental control technologies this site will have, Plant Washington will be protective of both.

Washington County and Georgia need the aid this facility can offer. Power is essential to everyday life and a few new jobs certainly will not hurt our desperate economy.

I fully support a Georgia Environmental Protection Division decision to issue the permits necessary for Plant Washington. Please register my comments in your official records.

Sincerely,

Dear Dr. Couch,

I am writing you to ask that you give favorable consideration to Power4Georgians application to build and operate Plant Washington here in Washington County.

It will provide jobs to a region of the state that desperately needs more industry and the economic effect will be positive for many counties in this area.

Also, I believe Georgia needs to prepare today for the power demands of the future. Failure to do would certainly lead to much higher power cost and weak job growth in the near future.

Finally, I am convinced that this project will have no negative environmental impact on our area. I reside on Mayview road approximately 6 miles from the proposed site of Plant Washington and any negatives (if there are any) are far outweighed by the positives this facility will bring.

Thank you

Dear Dr. Couch,

As a resident of Washington County I would like to ask you for any assistance that you might provide in granting the permits required to allow Power4Georgians to begin construction of Plant Washington as expeditiously as possible.

Aside from the obvious benefits that Washington County desperately needs, Georgia needs to increase its power generation capacity to meet the demands of the near future. Failure to do so, in a timely manner, will almost certainly result in much higher power cost in our state that would damage our ability to compete in a global economy.

I am sure that the Georgia EPD will be more than capable of insuring the adequate environmental standards required for the operation of this facility.

Thank you,

Atlanta, GA 30334

Dear Dr. Couch:

In researching information on Plant Washington and the imperative need for new power supplies for the state of Georgia, I am totally supportive of the efforts of Power4Georgians to build and operate Plant Washington.

According to population predictions for the state of Georgia, by the year 2015 the population will increase by more than 30%, or around 10 million people. The current sources of power generation are not adequate enough to fully address the basic needs of this number of people. Not only could individuals be affected by power shortages, but also our emergency management systems could be subject to black outs at critical times.

While there are those who oppose Plant Washington, stating that it is not economically viable as well as being unsafe, I am sure that this project will be built and maintained under the strictest controls which ensure the protection of human health and the environment.

As a taxpayer of Washington County, as well as a concerned citizen, I reiterate my full support of Plant Washington.

I respectfully request that you record my comments in your official records.

Sincerely,

Atlanta, GA 30334

Dear Dr. Couch:

This letter is confirmation of my support for Plant Washington. I am a resident of Washington County and fully support the efforts of Power4Georgians in building and operating a coal-fired power plant near Sandersville.

I have reviewed information on power plants that are already in operation and are similar in design to Plant Washington. Based on the modern technology that makes coal-fired facilities of today so much better than those of decades ago, I believe that this plant, as proposed, will be safe and protective of our environment. I have confidence that your agency's oversight will assure this is true from day one of plant operations and for years to come.

I live in a community hit especially hard by the current economic downturn and this is a project that comes at just the right time. As President of B-H Transfer Co., I have had to undertake the unfortunate task of reducing our workforce. We need jobs, and our county's tax digest needs a major boost. Plant Washington fills both requirements. As such, I am hopeful your agency will approve the necessary permits that will allow this project to become an actuality.

Thank you for allowing me to express my views.

Sincerely,

Atlanta, Ga. 30334

Dear Dr. Couch,

I am writing you to let you know of my support for Plant Washington. I have lived all of my life here in Washington County and realize that this is a unique opportunity to increase the tax base for our county. The Kaolin industry, which has provided a huge portion of our taxes, has steadily declined over the past decade or so.

I have studied the plans, scientific data and environmental issues for the construction and operation of this plant. I have also studied the future needs for electrical power for our state. We can not wait until we can gear up for alternative methods of producing energy at a cost that is in line with coal produced power.

I am convinced that the planners of this project have designed an electrical producing system that is of the latest construction methods that will have minimal impact on our environment and water tables.

For these reasons, I urge you to give your stamp of approval for Plant Washington.

Sincerely,

Ronald H. May, Treasurer  
Washington County Development Authority

**Dear Dr. Couch:**

**Please accept this as my letter in support of constructing Plant Washington. As a high school senior who is about to enter college this fall, I am already beginning to think about what I might want to do in life and where I might want to live. I have grown up in Washington County and might someday like to move back here, but under current circumstances, Washington County does not offer many possibilities for younger people like myself, so many in my age group and both older and younger than me will be electing not to return here because of a lack of opportunity. A plant like Plant Washington could do much to change that by offering jobs both inside and outside the plant's operations. I strongly encourage the EPD to issue the permit to build Plant Washington.**

**Sincerely,**

A handwritten signature in black ink that reads "Miles C. Lee". The signature is written in a cursive style with a long horizontal flourish at the end.

Dear Dr. Couch:

I am writing to inform you of my support of Plant Washington. During the past several years Washington County has experienced a rapid decline in kaolin mining and production, which has been the economic base of our community for the past half century. We are in need of an industrial stimulus that will replace the jobs and tax revenues that have been lost.

Having lived in Washington County my entire life, I think it is unfortunate that a vocal number of outsiders is imposing their minority view on the citizens of this county and are trying to keep a needed industrial business from locating here. We are hurting and our citizens need the good jobs Plant Washington will bring.

Knowing that EPD will have oversight of this project makes me confident that all precautions will be taken to ensure all our natural resources will be protected. Please give careful consideration to Power4Georgian's application for Plant Washington and approve the requested permits as soon as possible.

Dear Dr. Couch,

This letter is written to express my support for Plant Washington.

As a resident of rural Washington County, I am concerned about all the environmental issues that could adversely affect the environment in which we live. However, after carefully studying the plans for utilizing advanced technology upon which this plant will operate, I am convinced this plant will operate in a way which will provide maximum protection to assure that those of us who live here will still enjoy a clean and safe environment.

Furthermore, living in the rural, my water supply comes from deep wells, for which I initially had concern. After carefully examining the plans for water usage in the operation of Plant Washington, my concern regarding this matter has been resolved.

As a tax payer and resident of Washington County, I support this project and fully support the decision of Georgia Environmental Protection Division to issue the permits necessary for the construction and operation of Plant Washington.

Sincerely,

Dear Dr. Couch,

I have lived in Washington County for many years and want you to know I am in favor of the Plant Washington project. Our community has been very reliant on a few industries that are now scaling back. One of the companies just announced they were reducing their head count by 125 out of 250 total employees.

This investment by Power4Georgians will deliver reliable energy at predictable rates for years to come. The investment itself will make a tremendous impact on the economy of this town. As you know, it is very difficult to get business development moving in the right direction in small towns and this is our shot.

I ask you to please approve this permit not only because of the dire need of power generation in this area but also as an economic event that will provide this community and surrounding communities with much needed jobs.

The environmental impact has been a part of my decision making process whether to support or oppose this cause. It seems that the benefits far out way the effects considering the new technology that will be used to mitigate the environment risk.

Please approve these much needed permits for construction and operation of Plant Washington.

Sincerely,

Dear Dr. Couch;

I am writing this letter of support for the construction and operation of Plant Washington in Washington County, Georgia.

I have lived and worked in Washington County for 22 years. After my retirement, my wife and I plan to stay in Washington County. We also have two children and two grandchildren who live in the county. I believe the Plant Washington project is vital for our county's economy and is needed by our state as our leaders struggle to meet the power supply demanded by our growing industries and population. I also believe that Plant Washington, with the use of advanced technology and the guidance provided by Georgia's EPD, will be safe for our people and the environment.

I fully support a Georgia Environmental Protection Division decision to issue the permits necessary for Plant Washington.

Sincerely,

Atlanta, GA 30334

Dear Dr. Couch:

Having lived in Washington County for more years than I sometimes want to remember, I have developed a sincere love and appreciation for our community, and I want to go on record here as saying that I wholeheartedly support the building of Plant Washington. Our county needs new jobs, especially with the recent layoffs and terminations we have seen. Also, we need funding to support improvements to our roads, schools, emergency services, law enforcement, and all other county-related services. Those who oppose the building of this plant seem to be very short-sighted in failing to realize the positive impact this plant can have on our county.

I am also concerned about the shortfall in electric power our state will face if Plant Washington and other plants like it are not built. I for one do not want to face the possibility of brownouts or even blackouts, which we could easily experience in the not-too-distant future if we do not get these plants online. I am convinced that the EPD will not allow a "polluting monster of a plant" to be built and that this plant will be built well within the acceptable guidelines for pollution control the EPD has outlined for this and other coal-fired plants. I am not fearful that our environment will be adversely affected by the building of Plant Washington.

Please approve the permits for this plant so we can begin the construction process and begin to benefit the people of this county and this state.

Sincerely,

Gina C. Wiggins

Atlanta, Georgia 30334

Dear Dr. Couch:

My name is Tom Helton. I have been living in Washington County for 58 years - in the same house on the same tract of land adjacent to the proposed site of Plant Washington. We have the fifth generation of my family now living on this property. We are involved in agriculture, the kaolin industry, and electrical contracting and very much see the need for electricity in our area as well as other parts of our country. We are active in our environment, as hunting and fishing are a big part of our lives.

I feel in talking with representatives of Plant Washington, they will also be good stewards to our area and have the capability of making many improvements. Therefore, I support building Plant Washington.

With our economy in such uncertain conditions many people in our area need jobs. I feel that Plant Washington, with the oversight of your agency will be a big asset to our community.

Please help our community getting the permit for Plant Washington approved.

Sincerely,

Tom Helton  
907 Stephens Creek Rd  
Warthen, GA 31094

AIR PROTECTION BRANCH

Dear Dr. Couch,

I am writing this letter in support of Plant Washington. I have been a resident of this county for fifty years and have seen the boom and decline of our local economy, with the prospect of a much deeper decline if we do not address this issue now. I also am aware of the growing demand for electrical energy and the certainty of a shortage in the near future.

The location of Plant Washington would greatly enhance the assurance of a stable economy in our county through the addition of the jobs that it will provide along with a vast financial input through both ad-valorem and sales taxes.

I understand that there is a small segment of our population that fear that a coal plant will have a negative effect on the environment. I believe that the modern technology along with the oversight of your people would prevent any negative effect on our local environment.

I believe that my endorsement of this project represents the feeling of a vast majority of our population.

I thank you for the opportunity to address this issue and express my views.

Sincerely,

Aubin H. Willis

Atlanta, Ga. 30334

Dear Dr. Couch,

As a business owner and resident of Washington County, I want you to know that I fully support the efforts of Power 4 Georgians in building and operating a coal-fired power plant in Washington County. By March 31, 2009 we will have lost approximately 400 jobs due to plant closings or down sizing. In addition many sub contractors and support personnel have been eliminated. Washington County needs this plant to help bring in new jobs and help offset our county's tax digest losses.

With the advanced technology planned for construction of Plant Washington and the continued monitoring by the Georgia EPD, I am confident Plant Washington will be protective of human health and the environment.

Plant Washington would provide a much needed boost to Washington County and I ask that you approve the permits required to allow construction and operation of this facility.

Sincerely,

Larry T. Smith

Suite 1152 East Tower  
Atlanta, GA 30334**

**Dear Dr. Couch:**

**I am writing today to express to you my support of Plant Washington to be located near Sandersville, GA. Washington County is in such extreme need of jobs and other economic benefits that such a plant would bring to our community, not to mention the tax benefits that will help sustain the fiscal well being of our county, that we as community citizens need to offer support for its construction.**

**The shortfall of electric generating capacity that can become a reality for our state in the very near future is another reason to support the construction of such a plant. In examining the issues relating to environmental inputs, operational, water and other issues relating to the site selection, I am confident that Power4Georgians has adequately modeled and planned for any negatives associated with the building of the facility so that it will indeed be a good addition to our community and to the statewide needs for electricity going forward and that there will be minimal negative impact on the environment.**

**I also have the utmost of confidence in Georgia EPD's oversight in this endeavor and am satisfied that the issuance of a permit to build this plant will certainly be justified. Therefore, I offer my highest support for Plant Washington.**

**Sincerely,**

**William H. Wiggins  
Retired President of Thiele Kaolin Company**

Dear Dr. Couch:

In recent months I have had the privilege of becoming rather familiar with details pertaining to the construction of proposed Plant Washington. Having had the opportunity to inspect documents, modeling information, and filings for the project, along with being able to meet with Power4Georgians representatives, engineering company representatives and community citizens as well, it is my sincere opinion that Plant Washington will be very good for Washington and surrounding counties. The economic benefits will surpass anything this community has ever experienced, particularly from the standpoint of expanding the tax digest and adding potential local tax relief to the citizenry, offering much needed direct jobs to the community at a time when we desperately need them, and the offering of a plethora of other ancillary jobs and services either directly or indirectly related to the project. I am thoroughly convinced that Plant Washington will be a good community citizen as well, especially since those associated with Power4Georgians have made every effort thus far to address the concerns, questions, needs and desires of this community.

The environmental issues associated with the plant have been adequately addressed through continued interaction with your organization, and the engineering firms associated with the project have constantly been revamping their modeling to address concerns that have been expressed either by your organization or by concerned individuals.

It gives me a great sense of pride to think that Washington County can potentially have an enterprise like Plant Washington located in our midst, and I wholeheartedly support the project!

Sincerely,

Charles E. Lee

Atlanta, Georgia 30334

Dear Dr. Couch,

Thank you for your service to the State of Georgia. You have done an exceptional job of balancing the pro-business needs of Georgia while ensuring environmental standards are not compromised. Georgians need your prudent leadership and direction more than ever as it relates to electrical power generation and coal-fired power plants.

Being a life-long resident of Washington County, we are excited to have one of the state's largest economic development projects slated to come to our community. Plant Washington is using modern technology that makes coal-fired facilities of today so much better on the environment than in years past. I believe that this plant will be safe and protective of our environment, while providing 850 MW of electricity to Georgians. Plant Washington will provide 130 good jobs to a community, especially hard hit by the economic downturn.

Renewable sources of energy catch all the headlines, but if the State of Georgia is to prosper in the future, the ability of its citizens and businesses to procure affordable, dependable electricity will be critical. Plant Washington is meeting and in a lot of cases exceeding the requirements places on it by different regulations. Please support this economic development project that will be vital for the future of Washington County and the State of Georgia.

Sincerely,

Ben J. Tarbuton III

Suite 1152 East Tower  
Atlanta, GA 30334

Dear Dr. Couch:

I am a Professional Geologist who was born in Washington County and resides a few miles from the site of the Proposed Plant Washington power plant. I have attended meetings regarding the plant and reviewed MACTEC's permit applications at the EPD in Atlanta. I have also worked in the county's kaolin industry, written two books on county geology and know from first-hand knowledge the geology of the area and the new plant's probable impact on it.

Despite much clamor against Plant Washington, which is mainly from those who live outside of the county, I support the new plant. I feel that the county's water resources can sustain it, that it will bring an important number of new jobs and its tax base will help the county's economy.

As with any new plant of this size there are those who will be adversely impacted. These are my friends and neighbors. So far as possible the state needs to insure that these individuals are made whole from any losses in water rights, property values or quality of life issues resulting from the new plant. Power4Georgians appears to be ready to give assurances, and in some cases has already done so, that these problems will be solved on an individual basis.

Sincerely,

Dear Dr. Couch,

Please accept this letter as support for Plant Washington. My family is native to Washington County, and I have lived here the vast majority of my life.

Having previously served as the Mayor of Sandersville, I completely understand the importance of economic development and the development of a strong tax base. Washington County has been blessed for years with the kaolin industry which provided both. However, the time has come where diversity in our economic development is paramount to the continued assurance of the quality of life the citizens of Washington County have grown to enjoy and appreciate.

The infrastructure already present makes us a prime candidate for Plant Washington. I am confident the oversight that will be provided by your agency will assure that the environment and human health will be protected.

Sincerely,

Atlanta, GA 30334

Dear Dr. Couch,

I am writing you today to express my support of Power4Georgians' coal fired generation project targeted for Washington County, Plant Washington. During the dire economic times we are experiencing I believe it wise to invest in proven technology to meet the short fall of base load generation our state will experience during the next decade.

Many in the media seem to discount or even criticize the use of fossil fuels for the generation of electric energy. Their view is we should rely solely on wind and solar generation since they are "free". This could not be further from the truth. Although the fuel source, wind/sun light occur naturally and are "free", the location for the generation site is not nor is the infrastructure to accommodate it. Wind generation is not practical in Georgia. Photovoltaic generation requires massive amounts of land and the resulting generation costs per kWh are 3 to 4 times more expensive than traditional base load generation. Coal is our most abundant natural resource. We should not abandon this domestic fuel source and bet the future of base load needs on unproven and commercially unavailable technologies. Plant Washington will use best available technology to convert its fuel source to electric energy. It will use technology that currently exists and that is available.

There are many benefits for constructing this facility. Plant Washington will supply reliable electric energy at an affordable price. The Power4Georgians' facility will provide needed jobs that have been lost in the local community recently. It will add to the tax base of the County. It will provide additional tax revenue for Georgia. Searching for another economic stimulus package? Approving the necessary permits for construction is the first step.

I support this project and appreciate the opportunity to let you know.

Respectfully,

Frank Askew

AIR PROTECTION BRANCH

Dear Dr. Couch,

As a small business owner, volunteer fire chief for a small town, member of the Airport Authority, and member of the Tennille Downtown Development Authority, I fully support Plant Washington. Having a vital interest in the economic growth of our community, I am convinced that the investment that Power4Georgians will make to the community, along with the hundreds of construction jobs and then maintenance jobs, will help turn our local economic downturn into a boost for our local economy. Recently, several of our kaolin industries have been hit extremely hard; without new industry to replace those jobs and provide support to the community, we will be hard pressed to recover.

Furthermore, I have reviewed the scientific information that has been provided by Power4Georgians and by independent scientists associated with our kaolin industry. This information demonstrates the reliability of new clean coal technologies. Even President Obama in his first joint address to Congress called for clean coal technologies for energy production along with solar and wind. The energy crisis our state and the nation will face must be addressed by groups such as Power4Georgians, or we will find ourselves not able to meet the growing demands.

From my volunteer and business positions, I have the opportunity to talk with a great number of the citizens of Washington County. Most of the citizens I encounter are extremely supportive of the energy business locating in Washington County. Plant Washington is viewed as a way to secure our community for generations to come.

Once again, I fully support the Environmental Protection Division's endorsement of the necessary permits for Plant Washington.

Sincerely,

RE: Plant Washington

I write this letter to confirm my support for the construction of Plant Washington located in Washington County, Georgia. The demand for electricity and economic growth make the approval of this project the most important priority in my lifetime for the east central Georgia region.

Being from Washington County, I have a vested interest in the environment as well as the community. I am actively involved in land reclamation activities and serve on the Washington County Board of Education. I see first hand how we can utilize our natural resources while restoring them for future benefit.

Plant Washington will give the east central Georgia area the opportunity to be good stewards of our environment as well as our community. I support any effort to construct this coal fired generating facility in Washington County.

Sincerely,

Dear Dr. Couch,

I am writing today to let you know that I support Plant Washington. I have lived and worked in Washington County for the majority of my life. During this period, the citizens of Washington County have enjoyed a standard of living that surpassed that of our neighbors' in surrounding counties.

However, with the decline in the kaolin industry, our county is in need of a business enterprise that will bring jobs and generate essential tax revenues. We need an industry that will allow our youth who want to remain in this county that opportunity, an industry whose wages are adequate to support families. I believe Plant Washington is that industry.

In addition to the advanced technologies that will be used in this plant, I am confident that the oversight provided by your agency will assure Plant Washington will be protective of human health and the environment.
