

Public Advisory

County: Washington

Duke Energy Sandersville, L.L.C. (Sandersville Generating Station) has made an application (No. 12594) to construct and operate eight simple cycle combustion turbines capable of producing a nominal power output of 640 megawatts (MWs). Each turbine will be fired either with natural gas or low sulfur distillate fuel oil. Ancillary equipment includes two 150 horsepower diesel firewater pumps. Nitrogen oxide (NOx) emissions will be minimized from the turbines through the use of dry low-NOx burners and water injection, depending on the fuel being combusted..

The facility will be located at: near Mills Lindsey School Road (approximately 10.5 miles northwest of Sandersville), Sandersville, Georgia. 31094
